

OD 99B Hydraulic with delayed opening case

DESCRIPTION

- OD 99B saves water by delaying cistern filling while flush valve is opened
- **Compact**
- To be installed into ceramic or plastic, recessed or at sight cisterns, for replacement or as original equipment
- **Hydraulic closure** (no water hammer shock)
- **Adjustable water level**
- **Silent**
- Anti-backflow function
- Filter can be reached without disconnecting from water supply
- 1/2 plastic end-fitting (also available in 3/8)
- **Flow rate:** 0.14 l/s at 3 bars
- **Pressure function range:** from 0.5 to 16 bars

*Based upon a 4-people-family consumption when replacing a standard inlet valve

DELAYING CASE MECHANISM

The cistern gets empty more quickly than the delaying case, while the inlet valve is still closed.

Once the required volume water is released, the flush valve closes and the delaying case keeps draining water (connected vessels theory); then, the inlet valve opens to fill up the cistern.
